

## ECO ROOFING SOLUTIONS · GILBERT, AZ

# Google Business Profile, *audited.*

*A focused supplement to the main visibility audit. The GBP is the single biggest lever for "roofer near me" visibility — and Eco Roof's profile is leaving most of that lever untouched.*

**Methodology.** The live GBP panel can't be loaded directly from this environment, so this audit reads the profile through three lenses: a Google-data aggregator that surfaces the same fields Google publishes (poyst.com), cross-platform comparison against the same business's Yelp / BBB / HomeAdvisor presence, and the 2026 best-practice baseline for roofing contractors specifically. Where a finding is inferred rather than directly observed, it's flagged.

## GOOGLE RATING

## THE HEADLINE FINDING

## Eco Roof is collecting reviews *on the wrong platforms.*

31 Yelp reviews, hundreds-implied on HomeAdvisor, BBB-accredited since 2020 — and only 5 reviews on Google. The Google Business Profile is the surface that decides Local Pack visibility, where 80%+ of "roofing contractor near me" traffic flows. Reviews on Yelp and HomeAdvisor help with trust once a customer has found you. They don't help you get found in the first place.

*"After 25 years, BBB accreditation, and a third-generation owner, this should be one of the most visible roofers in the East Valley. It isn't — primarily because the GBP is treated as a directory listing instead of a marketing asset."*

# Where the trust is, vs. where the rankings are.

This is the same business, the same customers, the same 25 years of work — distributed across review surfaces that don't all carry the same weight in Google's local rankings.

## Current state vs. 2026 best practice

| GBP FIELD             | WHAT'S THERE              | BEST-PRACTICE TARGET                   | IMPACT     |
|-----------------------|---------------------------|----------------------------------------|------------|
| Google rating         | 4.6★                      | 4.7★+                                  | BORDERLINE |
| Review count          | 5                         | 20+ to compete in 3-pack               | CRITICAL   |
| Photos                | 0                         | 50+, refreshed weekly                  | CRITICAL   |
| Owner responses       | None visible              | 100% reply rate, <48hr                 | CRITICAL   |
| Review velocity       | Latest 3–5 mo old         | 2–4 new reviews / month                | HIGH       |
| Primary category      | "Roofing" (verify)        | Roofing Contractor                     | VERIFY     |
| Secondary categories  | None visible              | 5–9 relevant ones                      | HIGH       |
| Google Posts          | None visible              | 2+/week (also AI Overview signal)      | HIGH       |
| Q&A                   | Unknown / minimal         | 5–15 owner-seeded                      | HIGH       |
| Identity attributes   | Family-owned not surfaced | Family-owned, 3rd-gen, free est.       | HIGH       |
| Products              | None                      | 5–10 entries (AI summary source)       | MEDIUM     |
| Eco / cool-roof angle | Not expressed on GBP      | In services, posts, attributes, photos | HIGH       |

NAP consistency and posted hours (Mon–Sat 8a–5p) are correct as-is — no changes needed there.

## CRITICAL GAPS — RANKED BY IMPACT

# Ten fixes that change Local Pack visibility.

In priority order. The first three are recoverable inside week one and account for the largest share of the visibility lift.

## 01 Reviews going to the wrong platform

5 Google reviews after 25+ years; Yelp has 31, HomeAdvisor hundreds. Pointing the review-request workflow at Google instead unlocks more ranking lift than any other single change.

CRI

## 02 Zero photos on the listing

Top-ranking East Valley roofers run 100+ photos. Eco Roof has 0 — actively suppressing rankings and click-through. Existing project photos exist on the website and Yelp; they need to be on the GBP.

CRI

## 03 No owner responses to reviews

Google explicitly tracks response rate and speed as ranking signals. Replying to all 5 existing reviews (positive and the mixed one) is a free week-one win.

CRI

## 04 Likely missing 5–9 secondary categories

Tile, foam, flat, shingle, residential, commercial, repair — each maps to a valid Google category. Operating with one primary leaves 80% of category-driven discovery on the table.

HIG

## 05 No Google Posts cadence

Posts are now both a top-tier ranking signal and an AI Overview citation signal. With weekly blog content already produced, repurposing is essentially free.

HIG

## 06 Eco / cool-roof angle invisible on the GBP

The brand's most defensible asset isn't in services, attributes, posts, or photos. The GBP is one of the highest-leverage surfaces for asserting that positioning.

HIG

## 07 No Q&A seeded

Owner-posted Q&A behaves identically to FAQ schema for AI Overview citation. Same fix as the website FAQ rewrite, in a different surface.

MEDIUM

## 08 No identity / service attributes

Family-owned, third-generation (Eric Perry as named expert), free estimates, free drone inspections — each is a filter Google uses in conversational Maps queries.

MEDIUM

## 09 No Products entries

Foam systems, tile, cool-roof coatings, drone inspection — even for service businesses, AI Maps summaries pull from Products entries.

MEDIUM

## 10 Mixed review without an owner reply

An unanswered negative review is a louder signal than a thoughtful response acknowledging the issue — and AI assistants summarizing the brand will surface it as-is.

MEDIUM

## 90-DAY ROLLOUT

# A steady, weekly cadence — not a redesign.

Sequenced so the highest-leverage changes happen in week one, the cadence-building work fills weeks 2–4, and the velocity ramp compounds across days 30–90.

## WEEK 1 · QUICK WINS

## Foundation

- Confirm primary category = Roofing Contractor
- Add 5–9 secondary categories
- Reply to all 5 existing reviews
- Upload 30+ existing project photos
- Add identity + service attributes
- Update business description with East Valley + eco
- Seed 5–7 owner-posted Q&A entries

## WEEKS 2–4 · ACTIVATE

## Build cadence

- Wire review-request workflow to Google specifically
- Begin 2 Google Posts / week (mix of project + offer)
- Add 5–8 Products entries with photos & pricing ranges
- Photo cadence: 5+ new per week
- Confirm service-area cities match website footer (cap 20)

## DAYS 30–90 · COMPOUND

## Ramp velocity

- Target 4+ new Google reviews / month — drives 5 → 20+ in 90 days
- Sustained 2 posts / week (now the floor)
- Sustained weekly photo cadence — target 75+ total
- Q&A monitoring <48 hours
- Track Local Pack visibility for "roofing contractor Mesa AZ", "roof repair Gilbert AZ", "tile roof Mesa", "foam roof Phoenix"

## Crosswalk to the proposed Scope of Services

The audit's **Google Business Profile Optimization** line item (\$1,250 one-time) covers the Week 1 work above — claim, categories, photos, attributes, service area, business description, Q&A seeding, and the review-response sweep.

The ongoing posts cadence, photo cadence, and review-velocity ramp are best handled inside the **AEO Authority + Operations Retainer** (\$1,000/mo) — which already includes a review-velocity system and weekly performance summary.

This supplement reinforces the scope already proposed. It doesn't add new line items — it explains why the GBP optimization line is the highest-leverage one in the bundle for a roofer in this position.

## BOTTOM LINE

The GBP is recoverable in 90 days. *Without redesigning anything.*

Most of what's broken on this profile is broken because no one's been actively running it. The work is steady, weekly, and unglamorous — but it compounds, and it changes who shows up when an East Valley homeowner searches "roofer near me." That's the whole game.
