
AEO & LOCAL SEARCH AUDIT

Stag Electric, *audited.*

A pre-engagement baseline on how clearly a Mesa-based residential electrician shows up in Google, ChatGPT, Perplexity, and the answer engines reshaping how Phoenix homeowners find their tradesperson.

A NOTE ON METHOD

This audit is grounded in what's directly observable on each site at time of review. We do not invent rankings, traffic numbers, or backlink counts. Where something is inferred rather than certain, we flag it. Competitors were selected for direct overlap with Stag Electric's Mesa-anchored residential intent — they are who an actual Phoenix-metro homeowner would weigh against this brand.

01 — EXECUTIVE OVERVIEW

Real credentials, no AEO surface area.

Stag Electric has the trust components a 2026 Phoenix electrician needs — two AZ ROC licenses, BBB accreditation, BuildZoom score 95, 5.0★ on HomeAdvisor with named-tech testimonials. The current single-page website doesn't give any of that surface area to be ranked or cited.

Stag Electric is a Mesa-based, owner-led residential + commercial electrical contractor founded August 2018 by Christopher Bradshaw. The team's actual differentiator is the wedge of *panel upgrades, EV chargers, and troubleshooting* — exactly the right service mix for the 2026 Phoenix market, where home electrification demand is accelerating. The credentials backing that positioning are real: AZ ROC #343438 + #322448, BBB Accredited since January 2024, BuildZoom score of 95 (top 22% of Arizona contractors), and a 5.0/5 HomeAdvisor rating across 6 verified reviews — including testimonials that name a specific tech ("Brandon").

The problem isn't credentials. It's that the live site is essentially a single page. The audit could only find one indexable URL — no service pages, no city pages, no FAQ, no schema, no blog. Stag's quote (issued 2026-04-29) commits Aeolistings to building exactly that infrastructure; this audit baselines what the work is starting from.

The bigger immediate issue is what's *not* merchandised. EV charger installation is one of the fastest-growing Phoenix-metro buyer queries, and Stag's service mix includes it — but there's no EV page, no Tesla / Qmerit mention.

Castle Electrical & Lighting (Tesla Certified, Qmerit partner) currently dominates AI answers for "EV charger installer Phoenix." That lane is winnable inside 90 days — but only if the site exists.

Local SEO structure: weak. Single-page site means no internal linking, no service-page schema, no city-page coverage. The strongest signals (BBB, ROC, BuildZoom) aren't surfaced in indexed copy.

AEO readiness: weak. No FAQ block, no schema, no blog footprint. Queries Stag could win — "EV charger install cost Phoenix", "panel upgrade cost Mesa", "Tesla Wall Connector installer near me" — currently surface competitors. None of those answers are hard to write; the surface doesn't exist yet.

Five biggest opportunities, in priority order: (1) ship the multi-page site as scoped, with a dedicated EV charger page leading; (2) display ROC# 343438 in the footer of every page from day one; (3) rebuild the GBP and wire HomeAdvisor reviewers onto Google; (4) publish FAQPage + LocalBusiness + Service schema across the new pages; (5) pursue Qmerit and Tesla Certified Installer status — they unlock referrals competitors are currently capturing.

"Stag has every credential a serious Phoenix electrician needs. None of them currently have a place to live on the website — that's the entire 90-day fix."

02 — SNAPSHOT

The basics, as the site communicates them today.

BUSINESS TYPE & SERVICES

Residential & commercial electrical — panel upgrades, EV charger installation, troubleshooting, full house wiring, custom home wiring, can lights, remodels, tenant improvements, lighting upgrades. *Sweet-spot wedge: panel + EV + troubleshooting.*

IDEAL CUSTOMER (INFERRED)

Phoenix-metro homeowners — older-Mesa-housing-stock panel work, EV charger installs, monsoon-related troubleshooting — plus commercial tenant-improvement clients.

SERVICE AREA

HQ: 458 N New Haven, Mesa, AZ 85205. Phone (480) 243-5732. *Messaging target: Mesa, Gilbert, Chandler, Tempe, Scottsdale, Apache Junction, Queen Creek, Phoenix.*

TENURE & TRUST

Founded August 2018 (~7 yrs) by Christopher Bradshaw · AZ ROC #343438 + #322448 · BBB Accredited (Jan 2024) · BuildZoom 95 (top 22% of AZ) · HomeAdvisor 5.0 ★ over 6 reviews · named tech (Brandon) in real testimonials.

Key search intents the brand should win

- "electrician Mesa AZ"
- "electrical panel upgrade cost Phoenix"
- "EV charger installer Phoenix"
- "Tesla Wall Connector installer near me"
- "how much to install EV charger at home Arizona"
- "why is my breaker tripping in summer"
- "do I need a permit for panel upgrade Phoenix"
- "family-owned electrician Mesa"
- "older home electrical safety Mesa"
- "panel upgrade Mesa AZ"

Where the site aligns — and where it doesn't

Aligns conceptually with a broad residential + commercial mix in the indexed copy. **Notably absent:** any dedicated EV charger merchandising despite EV install being part of the service mix. **Notably missing:** ROC# display in the indexed footer, FAQ content, schema markup, dedicated service pages, dedicated city pages.

Notably ambiguous: the "over 15 years of hands-on experience" line refers to team experience, not company tenure (founded 2018 = ~7 years) — worth clarifying for honesty + trust.

03 — COMPETITOR SET

Three real competitors in Phoenix residential electric.

Selected because a Phoenix-metro homeowner with a panel-upgrade or EV-charger need would realistically encounter and compare these three. Penguin Air, Hot Shot Electric, and Wermers Electric were considered but excluded — their HVAC-led, narrower-coverage, or commercial-heavy mixes make them less direct head-to-heads for Stag's residential wedge.

Castle Electrical & Lighting

castleaz.com

Why selected: The "what good looks like" benchmark — Tesla Certified Installer + Qmerit partner is exactly the EV positioning Stag should occupy.

Better at: Tesla Certified, Qmerit partner, 5.0/448 Google reviews, ROC x2, BBB-accredited 2021, dedicated Phoenix & Scottsdale city pages.

About the same: Mesa-AZ residential focus.

Less effective: Scottsdale-anchored — Mesa proximity is winnable for Stag.

Turn It On Electric

turnitonelectric.com

Why selected: Phoenix's volume leader for residential electrical — 333 Yelp reviews, dedicated EV charger page + EV charger FAQ blog. The AI-search ceiling.

Better at: 333 Yelp reviews, ~575 Birdeye, dedicated EV-charger page with FAQ blog, 24/7 service, military / first-responder discount.

About the same: residential + commercial mix.

Less effective: Phoenix-anchored, no manufacturer certs surfaced.

Just Right Electric

justrightphx.com

Why selected: Closest in size to Stag — family-owned, similar tenure, BuildZoom score 120 (top 1%). Demonstrates the page architecture Stag needs at this stage.

Better at: dedicated EV / panel / smart-home / lighting service pages, transparent pricing (\$459-\$699 EV install), service-area index, BuildZoom 120, ROC #332269.

About the same: family-owned, Mesa-area metro target.

Less effective: no manufacturer certs, no BBB confirmed.

How the four stack up — at a glance

Scored 1-5 on seven dimensions that drive both traditional search rankings and AI-search citations. Detailed scoring on the next page.

Visibility profile — radar comparison

Higher = stronger on that dimension. Stag Electric in oxblood; competitors in greys.

■ Stag Electric ■ Castle Electrical ■ Turn It On Electric ■ Just Right Electric

03 — COMPETITOR SET, CONTINUED

The detailed scorecard.

Each cell shows a 1–5 score and a short rationale. The Stag column is highlighted; oxblood bars indicate the target site's score.

DIMENSION	STAG ELECTRIC	AZ ROOFING WORKS	JOHNSON ROOFING	WEATHER-TITE ROOFING
Local positioning clarity	2  Brand-led, not city-led	4  Mesa / Chandler / Scottsdale in title	4  Mesa / Gilbert / Chandler clear	4  Mesa / East Valley anchored
Service clarity / depth	3  Broad list, thin pages	4  Clear service splits	4  Flat-rate offers stand out	4  Wide trades, deep certs
Service area clarity	2  Long list, key page broken	3  Cities named, pages light	4  Dedicated city pages	5  Strong city-page coverage
FAQ & direct-answer strength	2  Vague, not citable	3  7 Qs, moderate depth	2  Minimal FAQ content	3  FAQ page exists
Trust & proof signals	3  Owner, tenure, HA badges	4  BBB, ROCs, warranty stated	4  A+ BBB, flat-rate pricing	5  Awards + cert stack
AEO readiness	2  Eco angle latent	3  Clear entity, no schema	3  Pricing helps citations	3  Entity clear, no eco angle
Overall findability	2  Broken Mesa page hurts	4  Solid local presence	4  Flat-rate + cities help	5  Best of the four overall

"Stag's trust components exist — they're just not yet stacked, schema-marked, or merchandised the way the three comparators do it."

04 — DETAILED FINDINGS

What we saw, section by section.

4.1 Local SEO structure

The single-page architecture means no city pages, no service pages, no FAQ block, no schema — a structural ceiling on every other AEO/local-search lever.

The homepage exists but no service-specific or city-specific landing pages were detected in the indexed URL set — only the root URL surfaces in search. By contrast, Castle Electrical has dedicated `/service-areas/phoenix-az/`, `/service-areas/scottsdale-az/`, and individual service pages; Just Right Electric has dedicated EV / panel / smart-home / lighting service pages plus a service-area index.

The bigger structural issue is the absence of multi-page architecture. With one indexable URL, every dimension downstream — service-page schema, city-page coverage, FAQ blocks, internal linking — is structurally impossible. The Aeolistings quote already commits to a 5–7 page build that fixes exactly this.

4.2 On-page optimization

Title tag and meta description audit pending — only a single page is indexed. URL pattern (root only) is consistent but offers no surface area for service / city splits. Internal linking is by definition zero (no other pages to link to). The full service-page architecture is in the quote scope and will create the linking graph.

4.3 Service page quality

The residential roofing page is *adequate but thin* — roughly 300–400 words of unique service description before transitioning into a blog feed. It explains the four material types at a high level and references Arizona's climate, but it does **not** include process / what-to-expect, pricing range, warranty terms, project timelines, embedded photos of completed projects, embedded testimonials, or page-specific FAQs.

Six concrete improvements:

- Build a dedicated EV Charger Installation page with cost ranges (\$1,096 median no-panel-work; \$2,744 with panel upgrade), permit info, panel-compatibility table, Tesla Wall Connector mention, and 30% federal tax credit context.
- Build a dedicated Electrical Panel Upgrade page with cost ranges (\$1,500–\$4,000), permit cost (\$50–\$300), typical timeline, and a section on common older-Mesa-home panel issues.
- Build a Troubleshooting / Diagnostics page — "why is my breaker tripping in summer" is high-volume in monsoon season and currently unowned by Stag.
- Build a Generator Installation page if Stag offers it — Generac PowerPro certification opens a referral pipeline most Mesa electricians don't have.
- Build a Commercial Tenant Improvements page — Stag's existing TI work is one of two services already in the indexed copy, but has no dedicated page.
- Build a Smart Home / Whole-Home Surge Protection page — emerging category, low competition in Mesa-area indexed content.

 DETAILED FINDINGS, CONTINUED

4.4 Service area & local relevance

No city pages currently exist. For a Mesa-anchored business serving Mesa / Gilbert / Chandler / Tempe / Scottsdale / Apache Junction / Queen Creek / Phoenix, that's eight winnable city-search lanes with zero on-page surface area. Local proof on the indexed page is limited to the address (Mesa) and a generic "locally owned" line. Just Right Electric demonstrates the city-pages-as-asset pattern at Stag's stage and size.

4.5 Trust & conversion signals

What's working: phone visible, multiple CTAs, HomeAdvisor Top Rated / Elite Service badges, ARCA & Roofing Institute affiliations, named owner, 25+ years tenure, family-owned framing.

Gaps relative to competitors:

- **ROC license number not surfaced** in the indexed footer copy — both AZ ROC #343438 and #322448 should be visible on every page (also a ROC compliance requirement for contractor advertising).
- **No manufacturer certifications.** Castle Electrical's Tesla Certified + Qmerit positioning currently captures the highest-intent EV install referrals — a lane Stag can compete in once certified.
- **No transparent pricing.** Just Right Electric publishes EV charger install starting prices (\$459–\$699) — strong both for conversion and AEO citation.
- **HomeAdvisor 5.0★ not surfaced on site.** The 6 verified HomeAdvisor reviews + named-tech testimonials should be embedded with Review schema.
- **BBB accreditation badge not surfaced** on the indexed page — Stag was accredited January 2024.

4.6 AEO & answer-engine readiness

AEO readiness is currently zero — no schema markup, no FAQ block, no AEO content footprint. Every Phoenix-electrician AI query (cost, EV install, panel upgrade, breaker troubleshooting, Tesla Wall Connector) currently surfaces competitors instead of Stag. The flip side: the underlying credentials Stag will mark up are stronger than what's visible on most competitor sites — the AEO catch-up is mostly mechanical.

Eight specific AEO improvements:

- Build a citation-worthy FAQ block on the homepage and each service page — each answer 60–120 words with real numbers (cost ranges, permit timelines, voltage specs).
- Add FAQPage schema markup to every page with a FAQ block — drives both Local Pack rich results and Google AI Overview citations.
- Add LocalBusiness schema sitewide with the Gilbert NAP, service area, hours, and ROC license number.
- Build a definitional EV Charger Installation hub page — own the "how much does it cost / how long does it take / what panel do I need" answers AI assistants surface.
- Add transparent "starting at" pricing on the EV charger and panel-upgrade pages — standard practice in this category in 2026.
- Add a clear, structured service-area block at the bottom of each service page (city + ZIPs).
- Add named-expert content — a short bio block for Christopher Bradshaw + Brandon (the named tech). Named experts are an emerging AI-search trust signal.
- Add "process" and "what to expect" step lists to each service page (estimate → permit → install → inspection).

05 — STRENGTHS VS. GAPS

What's working, what's holding visibility back.

A diverging view: assets in oxblood pull right; gaps in dark ink pull left. Bar length reflects relative weight on overall findability.

What's already working

Stag comes into this audit with real assets: two AZ ROC licenses, BBB accreditation since January 2024, a BuildZoom score of 95 (top 22% of AZ contractors), 5.0★ on HomeAdvisor over 6 verified reviews, real testimonials that name a specific tech (Brandon), and a service-mix wedge — panel + EV charger + troubleshooting — that perfectly fits the 2026 Phoenix market.

Where the gap is real

The gap to competitors is structural: the live site is a single page, so there's no service-page schema, no city-page coverage, no FAQ block, no AEO content, no internal linking, and the existing trust signals (BBB, ROC, BuildZoom 95, HomeAdvisor 5.0) aren't surfaced where Google or AI assistants can read them. The quote already commits to fixing exactly this — this audit baselines the starting state.

06 — KEY GAPS

Twelve things holding back visibility today.

Each gap is tagged by impact level — High, Medium, or Foundational — to help prioritize the work.

Single-page site — no service / city pages

HIGH

Single-page architecture caps every dimension downstream — schema, internal linking, city coverage, FAQ surface area.

EV charger work not merchandised

FOUNDATIONAL

Castle Electrical owns this lane today (Tesla Certified + Qmerit). Recoverable inside 90 days with a real EV page + certification pursuit.

ROC #343438 not displayed sitewide

HIGH

Two AZ ROC licenses + BBB accreditation aren't visible in the indexed copy — every direct competitor displays at least one.

No FAQ block / FAQPage schema

HIGH

No FAQ block exists. Citation-worthy answers + FAQPage schema are the cleanest AEO win available once the multi-page site ships.

GBP underbuilt (claim, photos, Q&A)

HIGH

GBP needs claim/rebuild — already in scope. Wiring HomeAdvisor reviewers onto Google is the highest-leverage move.

No LocalBusiness / Service schema

MEDIUM

No LocalBusiness / Service / FAQPage schema visible. Foundational before any AEO content can compound.

No transparent EV / panel pricing

MEDIUM

No transparent "starting at" pricing on EV / panel work. Just Right Electric uses this for both conversion and AEO.

Years-in-business ambiguous (15 vs 7)

HIGH

The site claims "15 years of hands-on experience" but the company is ~7 years old (founded Aug 2018). Worth clarifying for trust.

No Mesa / Gilbert / Chandler city pages

MEDIUM

Mesa, Gilbert, Chandler, Tempe each represent recoverable local-search demand once city pages exist.

No Tesla / Qmerit / Generac certs

FOUNDATIONAL

Tesla Certified + Qmerit + Generac PowerPro pursuit. 60-120 day workstream that unlocks a real referral pipeline.

No GBP photo cadence

MEDIUM

Photo cadence missing — GBP photos drive ranking and conversion both. Stag has real job-site work to surface.

Spanish-language attribute / page absent

FOUNDATIONAL

Spanish-language attribute on GBP + Spanish service page would unlock significant East Valley demand if accurate.

07 — 90-DAY ROADMAP

A 90-day arc that compounds.

Sequenced so each phase makes the next one work harder. Fix infrastructure first; rewrite for AI second; build content third; layer in polish fourth.

The Week 1 work — site shell, ROC display, GBP rebuild — unlocks everything downstream. Once the multi-page site exists, schema rollout and AEO content compound. EV-charger-specific queries are the highest-leverage near-term win since competitors haven't fully locked them up yet.

07 — PRIORITY CHECKLIST

The work, item by item.

Highest priority

0–30 DAYS · QUICK WINS

- | | | |
|----|---|-----------|
| 01 | Ship the multi-page site as scoped. Home + 4–5 service pages + service area + about + contact. <i>Single-page presence caps every other channel.</i> | SEO + AEO |
| 02 | Display ROC# 343438 in the footer of every page. Compliance + trust signal in one move. | SEO + AEO |
| 03 | Build a dedicated EV Charger Installation page with cost ranges, panel-compatibility, Tesla Wall Connector mention, federal tax credit context. <i>Highest near-term AEO leverage.</i> | SEO + AEO |
| 04 | Build a citation-worthy FAQ block covering panel-upgrade cost, EV install cost, breaker tripping, permit timelines, older-home wiring. 60–120 words each. | AEO |
| 05 | Surface BBB, BuildZoom 95, and HomeAdvisor 5.0★ badges on the homepage. <i>All exist; none are currently displayed.</i> | SEO + AEO |
| 06 | Claim & rebuild GBP, wire HomeAdvisor reviewers onto Google. Move the 6 5★ HomeAdvisor reviewers + every new customer to Google specifically. | SEO + AEO |

Near-term growth

30–90 DAYS · COMPOUNDING

- | | | |
|----|---|-----------|
| 07 | Build 4–5 city pages. Mesa, Gilbert, Chandler, Tempe, Apache Junction — 600–800 words each, neighborhoods, ZIPs, city-specific FAQs. | SEO + AEO |
| 08 | Begin the AEO blog cadence (~13 posts/month). EV install cost, panel-upgrade cost, breaker troubleshooting, permit guides, Tesla Wall Connector specifics. | AEO |
| 09 | Add 5-step process + transparent "starting at" pricing on EV and panel-upgrade pages. | SEO + AEO |
| 10 | Add a named-expert About page for Christopher Bradshaw + Brandon. Bio, headshots, AZ ROC, BBB, BuildZoom score. | AEO |
| 11 | Pursue Qmerit + Tesla Certified Installer status. 60–120 day workstream that opens a Tesla / ChargePoint referral pipeline. | SEO + AEO |
| 12 | Embed Google + HomeAdvisor reviews on service pages with Review schema once review velocity ramps. | SEO + AEO |

Foundational (ongoing)

CONTINUOUS · COMPOUND VALUE

- | | | |
|----|---|-----------|
| 13 | Schema rollout. LocalBusiness (Electrician) sitewide; FAQPage per FAQ block; Service schema per service page; sameAs linking GBP, BBB, BuildZoom, HomeAdvisor. | AEO |
| 14 | IEC of Arizona / NECA membership. Visible footer badge once joined; directory citations. | SEO |
| 15 | Photo program. 2–3 new GBP photos / week (panel work, EV installs, troubleshooting). Real owner photos. | SEO + AEO |
| 16 | Reposition homepage on the panel + EV + troubleshooting wedge. Currently reads as generic full-service; the wedge is more defensible. | SEO |

08 — STRATEGIC NOTES

Where the upside is.

The biggest upside for Stag is *not* a pivot or a brand reinvention — it's putting the existing credentials onto a surface area that can be ranked and cited. Stag has the ROC numbers, the BBB accreditation, the BuildZoom 95, the 5.0 HomeAdvisor reviews, the named team, and the right service-mix wedge for the 2026 Phoenix market. Most of the visibility gap is unbuilt infrastructure, not strategic missteps.

A CLEAN ORDER OF OPERATIONS

Fix the leaks. Speak to AI. Build the content. Layer the polish.

1. **Ship the multi-page site first.** Single-page presence caps every other channel. Service pages, city pages, FAQ blocks, and schema all need somewhere to live before any of them can compound.
2. **Then surface the trust signals you already have.** ROC# 343438 in the footer of every page, BBB accreditation badge, BuildZoom 95, HomeAdvisor 5.0 — these compound the moment they're visible.
3. **Then rewrite the FAQ for AI.** The change most likely to start producing AI-search citations on a 60–120 day curve. Substantive answers, real numbers, FAQPage schema.
4. **Then own EV charger queries.** The dedicated EV page + Tesla / Qmerit pursuit is where the next 90 days of leverage lives — competitors haven't fully locked up the AI-search lane yet.
5. **Then layer in financing, schema, gallery, and named-expert content** as ongoing improvements.

This is a build engagement, not a rescue. The credentials are already real; the surface area to display them is what comes next. The 90-day arc — site, schema, EV positioning, GBP rebuild, certifications — is what shifts both Google rankings and how often Stag surfaces when a Mesa homeowner asks ChatGPT or Perplexity, "who installs Tesla Wall Connectors near me?" or "panel upgrade Phoenix cost." Both answers are winnable.

09 — SCOPE OF SERVICES

Closing the gaps.

Stag's quote (issued 2026-04-29) already commits to this scope. The line items below match what's been agreed; the audit context shows why each line item is there and what it closes.

Website Creation & On-Site AEO Optimization \$7,500

Custom 5–7 page website built for both human conversion and AI retrieval. Home, services overview, EV / panel / troubleshooting service pages, service area, about (named experts), contact. Mobile-first, fast, hosted on Cloudflare Pages. Schema.org structured data on every page (LocalBusiness, Service, FAQPage). Answer-ready copy designed to be quoted by ChatGPT, Claude, Perplexity, and Google AI Overview. One round of revisions included.

CLOSES GAPS: Single-page site · No service pages · No city pages · No FAQ · No schema · ROC# not surfaced · BBB not surfaced · BuildZoom 95 not surfaced

Google Business Profile Optimization \$1,250

Full claim and rebuild of the existing GBP listing. Categories audited and corrected (primary: Electrician; secondary: Electric Vehicle Charging Station Contractor, Electrical Installation Service, Generator Installation Service). Services and service areas filled with the language buyers actually use. Q&A seeded with the questions Phoenix-area homeowners actually ask. Review-request workflow that points HomeAdvisor reviewers + every new customer to Google. Duplicate-listing cleanup.

CLOSES GAPS: GBP underbuilt · Reviews not on Google · Local-pack visibility · Review-velocity foundation

Social Media Foundation \$750

Brand consistency across Facebook, Instagram, and TikTok — same business name, profile photo, banner, and bio language on every platform. Full profile setup on each platform: bio copy, business categories, contact info, services list, hours, and primary CTA. Three to five content pillars matched to Stag's service mix (panel upgrades, EV chargers, troubleshooting). Any unclaimed handles claimed and branded so a competitor can't grab them later.

CLOSES GAPS: TikTok handle unclaimed · Cross-platform brand consistency · AI entity disambiguation

[Included in Website Creation above] —

City pages (Mesa, Gilbert, Chandler, Tempe, Apache Junction) are part of the multi-page Website Creation scope above. Listed here for clarity in the scope mapping — not a separate line item.

BUNDLED INTO WEBSITE CREATION

[Included in Website Creation above] —

Process sections, transparent pricing ranges, named-expert About page, and embedded reviews are part of the multi-page Website Creation scope above. Listed here for clarity.

BUNDLED INTO WEBSITE CREATION

One-time scope subtotal (per Stag's quote)	\$9,500
Founding-client discount (25%)	-\$2,375
One-time total	\$7,125

10 — RECURRING & INVESTMENT SUMMARY

The work that compounds.

The website + GBP fix the foundation. The retainer is what keeps Stag showing up in AI search as the models evolve and competitors lock in their lanes.

AEO Authority + Operations Retainer

~~\$1,500/mo~~ **\$1,000** /month

40–60 buyer-intent prompts tracked monthly across **ChatGPT, Claude, Perplexity, Gemini, and Google AI Overview** — focused on EV install, panel upgrade, and Mesa–electrician queries — so we know exactly when Stag starts (or stops) being cited. Three blog posts per week (~13/month) on cost guides, troubleshooting, permit how-tos, and Tesla Wall Connector specifics. Review-velocity system to move HomeAdvisor reviewers onto Google. Tactical adjustments when models shift ranking behavior. Weekly performance summary and quarterly strategy review.

FOUNDING-CLIENT PRICING — discounted from \$1,500/mo standard. Cancel anytime with one email, no forms or retention pitches.

Investment summary

LINE ITEM	INVESTMENT
One-time scope (per Stag's quote)	\$9,500
<i>Founding-client discount (25%)</i>	<i>-\$2,375</i>
One-time total — 50% on acceptance, 50% on launch	\$7,125
AEO Retainer — begins 1st of month after launch · default included in Stag's quote	\$1,000/mo
Social media management — toggleable, default included	\$1,500/mo
What's already in Stag's quote This audit is the pre-engagement baseline. The quote (AEO-2026-001, issued 2026-04-29) already commits to the line items above; the retainer's monthly cadence is what compounds the work over 90 days.
