
AEO & LOCAL SEARCH AUDIT

Eco Roofing Solutions, *audited.*

A read on how clearly the East Valley's eco-friendly roofer shows up in Google, ChatGPT, Perplexity, and the answer engines reshaping local search.

PREPARED FOR

A NOTE ON METHOD

This audit is grounded in what's directly observable on each site at time of review. We do not invent rankings, traffic numbers, or backlink counts. Where something is inferred rather than certain, we flag it. Competitors were selected for direct overlap with Eco Roof's primary East Valley intent — they are who an actual customer would weigh against this brand.

01 — EXECUTIVE OVERVIEW

A real differentiator, quietly under-expressed.

Eco Roofing Solutions has something almost no East Valley roofer has — a clear eco / energy-efficient angle in a desert market that genuinely cares about cooling costs. The site today doesn't yet make the most of it.

Eco Roof is a Gilbert-based, family-owned roofing contractor with 25+ years of experience and a meaningful brand differentiator: an eco-friendly, energy-efficient angle built around tile, foam, flat, and reflective cool-roof systems suited for the Phoenix Valley. That positioning is real, defensible, and aligned with the kinds of questions AI assistants increasingly field — *"what's the most energy-efficient roof for Phoenix?"*, *"do cool roofs work in Arizona?"*

That said, the site today reads more like a brochure than a local-search asset. The homepage leads with brand language ("Arizona's Eco-Friendly Roofing Experts") rather than city-anchored intent like *Mesa* or *East Valley*. The H1 says Mesa but the address says Gilbert. The FAQ exists but answers are short and promotional — not substantive enough for AI systems to quote.

Two issues are more urgent. The dedicated **Mesa city page returned a 500 server error** in repeated checks, and the **XML sitemap also returned a 500**. Both quietly suppress visibility in search engines and AI crawlers right now. Neither requires content work to fix.

Local SEO structure: moderate. The bones are there — city list, service taxonomy, named owner, long tenure — but the structure is thin in the places that matter most: city-page depth, internal linking, on-page entity clarity, and the title-tag/H1 signals search engines weight most heavily.

AEO readiness: weak-to-moderate. The eco angle is a latent strength but not yet expressed as the kind of direct, structured, citation-worthy content AI assistants reward. There's no visible LocalBusiness or FAQPage schema. The FAQ answers are not quotable. The eco/cool-roof positioning lives only in blog form.

Five biggest opportunities, in priority order: (1) fix the broken Mesa city page and sitemap immediately; (2) rewrite the FAQ to answer real customer questions in citation-worthy depth; (3) double down on the eco/cool-roof angle as canonical content competitors don't have; (4) add transparent warranty and (where possible) pricing signals; (5) build out unique East Valley city pages for Mesa, Gilbert, Chandler, Scottsdale, Tempe, Queen Creek with neighborhood-specific local proof.

"The eco angle is a latent strength — defensible, distinct, and a natural fit for AI search. Today it lives mostly in blog posts. It belongs on canonical service pages."

02 — SNAPSHOT

The basics, as the site communicates them today.

BUSINESS TYPE & SERVICES

Residential & commercial roofing — repair, installation, replacement, maintenance. Material focus: tile, foam, flat, asphalt shingle, rolled. *Distinct: eco-friendly/energy-efficient angle.*

IDEAL CUSTOMER (INFERRED)

East Valley homeowners motivated by energy bills, longevity & sustainability — plus light commercial / property owners needing flat or foam systems.

PRIMARY SERVICE AREA

HQ: 75 W Baseline, Suite 19, Gilbert, AZ. Listed coverage: 35+ Phoenix-metro cities. *Messaging emphasis: Mesa & East Valley.*

TENURE & TRUST

25+ years in business · family-owned · named owner Eric Perry · ARCA & Roofing Institute affiliations · HomeAdvisor Top Rated.

Key search intents the brand should win

- "roofing contractor Mesa AZ"
- "roof repair Gilbert AZ"
- "roof replacement Chandler AZ"
- "foam roof Phoenix"
- "tile roof repair Mesa"
- "flat roof contractor East Valley"
- "energy-efficient roofing Arizona"
- "cool roof installer Phoenix"
- "eco-friendly roofer Mesa"
- "commercial roof repair Mesa AZ"

Where the site aligns — and where it doesn't

Aligns reasonably well with material-specific intents (tile, foam, flat each have a section) and with the eco angle in the blog. **Notably vague** on city-specific intent: the homepage and service pages don't lead with the city, and the dedicated Mesa city page is currently inaccessible. Also vague on commercial roofing as a distinct buyer journey — facility managers and property owners deserve their own track.

03 — COMPETITOR SET

Three real competitors in the East Valley.

Selected because an actual East Valley homeowner researching roofing in Mesa, Gilbert, or Chandler would realistically encounter and compare these three. Lyons Roofing was reviewed as a regional benchmark but excluded from the formal set — its Phoenix/Tucson focus is broader than Eco Roof's East Valley target.

AZ Roofing Works

azroofingworks.com

Why selected: Mesa-based direct competitor with the same material mix (tile, shingle, foam, flat) and the same East Valley intent.

Better at: BBB accreditation, ROC numbers, named owner with 50+ years, explicit 2-year transferable warranty, financing, real-estate roof certifications.

About the same: material taxonomy, FAQ depth.

Less effective: no eco / sustainability angle.

Johnson Roofing

johnsonroofingaz.com

Why selected: Mesa / Gilbert / Chandler service area mirrors Eco Roof; appears for East Valley roofing searches.

Better at: transparent flat-rate pricing (\$350 tile, \$725 leak repair), dedicated city pages for Mesa / Gilbert / Chandler, A+ BBB, "since 2004" entity statement.

About the same: blog and gallery presence.

Less effective: no financing, weak FAQ, no specialty positioning.

Weather-Tite Roofing

roofweathertite.com

Why selected: Gilbert HQ — same town as Eco Roof. Strong city pages and certification stack make it the "what good looks like" benchmark.

Better at: dedicated city pages for 7 cities, deep manufacturer-cert stack (GAF Master Select, James Hardie Elite, Malarkey Emerald), Enhancify financing, SMS contact, multiple 2025 awards.

About the same: family-owned, trade-association ties.

Less effective: no clear sustainability differentiator.

How the four stack up — at a glance

Scored 1–5 on seven dimensions that drive both traditional search rankings and AI-search citations. Detailed scoring on the next page.

Visibility profile — radar comparison

Higher = stronger on that dimension. Eco Roof in oxblood; competitors in greys.

■ Eco Roofing Solutions ■ Weather-Tite Roofing ■ AZ Roofing Works ■ Johnson Roofing

03 — COMPETITOR SET, CONTINUED

The detailed scorecard.

Each cell shows a 1–5 score and a short rationale. The Eco Roof column is highlighted; oxblood bars indicate the target site's score.

DIMENSION	ECO ROOFING SOLUTIONS	AZ ROOFING WORKS	JOHNSON ROOFING	WEATHER-TITE ROOFING
Local positioning clarity	2  Brand-led, not city-led	4  Mesa / Chandler / Scottsdale in title	4  Mesa / Gilbert / Chandler clear	4  Mesa / East Valley anchored
Service clarity / depth	3  Broad list, thin pages	4  Clear service splits	4  Flat-rate offers stand out	4  Wide trades, deep certs
Service area clarity	2  Long list, key page broken	3  Cities named, pages light	4  Dedicated city pages	5  Strong city-page coverage
FAQ & direct-answer strength	2  Vague, not citable	3  7 Qs, moderate depth	2  Minimal FAQ content	3  FAQ page exists
Trust & proof signals	3  Owner, tenure, HA badges	4  BBB, ROCs, warranty stated	4  A+ BBB, flat-rate pricing	5  Awards + cert stack
AEO readiness	2  Eco angle latent	3  Clear entity, no schema	3  Pricing helps citations	3  Entity clear, no eco angle
Overall findability	2  Broken Mesa page hurts	4  Solid local presence	4  Flat-rate + cities help	5  Best of the four overall

"Most of Eco Roof's gap to its closest competitors is unforced — content, clarity, and infrastructure. Not strategy."

04 — DETAILED FINDINGS

What we saw, section by section.

4.1 Local SEO structure

The bones of a local-first site are present — but two infrastructure failures and a brand-led title tag mute most of it.

The homepage establishes the brand and services well but does **not anchor the business to a specific city** in the title tag or H1. The page title reads *"Arizona's Eco-Friendly Roofing Experts | Eco Roofing Solutions"* — a brand statement, not a search-intent statement. By contrast, AZ Roofing Works leads with *"#1 Roof Repair & Replacement Company | Mesa, Chandler & Scottsdale AZ"* and Weather-Tite leads with *"Roofing Contractor in Mesa, Arizona."*

The bigger structural issue is **city pages**. The site references city pages in navigation (Mesa, Phoenix, Tempe), but the Mesa page (*/roofing-mesa-az/*) returned a 500 server error on repeated checks. Combined with the sitemap also returning 500, this suggests city-page infrastructure that may be partially or wholly inaccessible to search engines and AI crawlers right now. This is the single highest-leverage fix on the site.

4.2 On-page optimization

Title tags and H1s do not combine *service + city* the way local-intent searches reward. Heading structure on service pages is generally readable — H2/H3 break out material types (tile, flat, shingle, rolled), which is good. URL patterns are clean and descriptive (*/residential-roofing/*, */roofing-mesa-az/*). Internal linking is light — body copy rarely links contextually into city pages or material sub-services with descriptive anchor text.

4.3 Service page quality

The residential roofing page is *adequate but thin* — roughly 300–400 words of unique service description before transitioning into a blog feed. It explains the four material types at a high level and references Arizona's climate, but it does **not** include process / what-to-expect, pricing range, warranty terms, project timelines, embedded photos of completed projects, embedded testimonials, or page-specific FAQs.

Six concrete improvements:

- Add a 5-step process and a plain-language "what affects the price" section to the residential page, plus 4–6 page-specific FAQs.
- Promote commercial roofing to a peer of residential, with an FAQ aimed at facility / property managers.
- Own the foam roofing page — it's a Phoenix-climate specialty and a real AEO opportunity.
- Add tile-specific FAQs (broken-tile cost, underlayment lifespan vs. tile lifespan, how to tell which is failing).
- Explain when flat is appropriate (patios, additions) and how it differs from foam.
- Build a canonical eco / cool-roofing hub page — the brand differentiator currently lives only in the blog.

DETAILED FINDINGS, CONTINUED

4.4 Service area & local relevance

The site lists 35+ cities served — a strong intent signal but a weak execution signal. A list of city names without dedicated, useful pages does not produce visibility for those city searches. Worse, the one city page tested (Mesa) returned a 500 error. Local proof is limited: blog content references the Arizona climate, but there's little explicit local proof tied to specific neighborhoods, ZIPs, completed projects, named local landmarks, or named local clients.

4.5 Trust & conversion signals

What's working: phone visible, multiple CTAs, HomeAdvisor Top Rated / Elite Service badges, ARCA & Roofing Institute affiliations, named owner, 25+ years tenure, family-owned framing.

Gaps relative to competitors:

- **Warranty terms not stated.** AZ Roofing Works states a 2-year transferable workmanship warranty up front; Johnson Roofing states 5 years on repair work. Eco Roof references warranties in blog content but doesn't commit to terms on main pages.
- **No financing offered.** Weather-Tite uses Enhancify; AZ Roofing Works links a financing page. Roof replacement is a \$10K–\$30K+ purchase — financing is now table-stakes.
- **No transparent or "starting at" pricing.** Johnson Roofing publishes flat rates (\$350 tile, \$725 leak repair) — strong both for conversion and AEO.
- **Reviews referenced but not embedded.** No star ratings, review count, or quoted reviews surfaced inline.
- **BBB and ROC license number not surfaced** on the homepage, while competitors display them openly.

4.6 AEO & answer-engine readiness

This is where Eco Roof has the most upside relative to competitors — and the most current weakness in execution. The business *entity* is clear (name, address, phone, owner, tenure) but is not consistently structured for machine extraction (no visible LocalBusiness schema, no FAQPage schema). The FAQ page exists but answers are short and promotional — unlikely to be quoted by ChatGPT, Perplexity, Claude, or Google AI Overviews because they don't actually contain extractable facts.

Eight specific AEO improvements:

- Rewrite the FAQ with citation-worthy answers — each containing a number, range, timeframe, or specific fact (60–120 words each).
- Add FAQPage schema markup to the FAQ page and to FAQ blocks on each service page.
- Add LocalBusiness schema sitewide with the Gilbert NAP, service area, hours, and ROC license number.
- Build a definitional eco / cool-roofing hub page answering the questions AI is being asked.
- Add transparent pricing or "starting at" ranges to each service page.
- Add a clear, structured "service area" list at the bottom of each service page (city + ZIPs).
- Add named-expert content — a short bio block for Eric Perry. Named experts are an emerging trust signal.
- Add "process" and "what to expect" step lists to each service page.

05 — STRENGTHS VS. GAPS

What's working, what's holding visibility back.

A diverging view: assets in oxblood pull right; gaps in dark ink pull left. Bar length reflects relative weight on overall findability.

What's already working

Eco Roof comes into this audit with real assets: a defensible eco / energy-efficient differentiator, 25 years of tenure, a named owner, a family-owned story, recognized HomeAdvisor badges, ARCA affiliation, and a thoughtful blog footprint that already covers cool roofs, reflective coatings, and warranty topics. Most local roofers can't claim half of this.

Where the gap is real

The gap to competitors is mostly self-inflicted: a broken Mesa city page, a broken sitemap, a brand-led title tag instead of a city-led one, FAQ answers that don't answer anything, no warranty commitments on main pages, no financing, no transparent pricing, no schema, the eco angle buried in the blog. Each is fixable — and most without redesigning anything.

06 — KEY GAPS

Twelve things holding back visibility today.

Each gap is tagged by impact level — High, Medium, or Foundational — to help prioritize the work.

Broken Mesa city page (500)

HIGH

Their headline city page is unreachable, suppressing rankings for the most important search intent in their primary market.

Sitemap.xml returns 500

FOUNDATIONAL

Search engines and AI crawlers may be missing pages; new content takes longer to be discovered.

Brand-led title with no city anchor

HIGH

Loses the easiest on-page signal for local search intent — three competitors already do this better.

FAQ answers not citation-worthy

HIGH

AI assistants will pass over them. The single biggest AEO miss given how much else is in place.

No warranty terms on main pages

HIGH

A trust gap competitors are already filling with concrete years and "transferable" language.

No financing option

MEDIUM

Eliminates a portion of buyers and signals less polish than competitors using Enhancify or similar.

No transparent pricing signals

MEDIUM

Eliminates a powerful conversion lever — and the kind of quotable fact AI systems love.

Eco angle buried in the blog

HIGH

The brand's best asset isn't expressed as canonical, structured service-hub content.

Thin city pages

MEDIUM

Gilbert, Chandler, Scottsdale, Tempe, Queen Creek each represent recoverable local search demand.

No LocalBusiness or FAQPage schema

FOUNDATIONAL

Misses the structured-data signal AI systems and Google use to confirm entity facts.

No embedded reviews / star count

MEDIUM

Trust friction at the moment of conversion. Competitors surface this prominently.

Gilbert HQ vs. Mesa messaging mismatch

FOUNDATIONAL

Mild entity inconsistency that's worth resolving in copy. Lead with East Valley framing.

07 — 90-DAY ROADMAP

A 90-day arc that compounds.

Sequenced so each phase makes the next one work harder. Fix infrastructure first; rewrite for AI second; build content third; layer in polish fourth.

The infrastructure fixes in week 1 unlock everything downstream — once the Mesa page renders and the sitemap returns 200, every later content investment becomes findable. The AEO rewrites in weeks 2-4 begin producing AI-search citations on a 60-120 day curve.

07 — PRIORITY CHECKLIST

The work, item by item.

Highest priority

0–30 DAYS · QUICK WINS

01	Restore the Mesa city page. Fix the 500 at / roofing-mesa-az/ and confirm it renders. <i>Their primary market intent is currently invisible.</i>	SEO + AEO
02	Restore /sitemap.xml. Investigate the 500; resubmit in Google Search Console and Bing Webmaster Tools. <i>Ensures all pages are crawlable.</i>	SEO + AEO
03	Rewrite homepage title & H1 with East Valley anchor. Suggested title: <i>"Roofing Contractor in Mesa & the East Valley / Eco Roofing Solutions."</i>	SEO
04	Rewrite FAQ with substantive, 60–120 word answers. Add 5–8 new questions on cost, timelines, warranty, foam vs. tile vs. shingle. <i>The single highest-leverage AEO change.</i>	AEO
05	Add explicit warranty language to homepage and every service page. <i>Closes a trust gap competitors already fill.</i>	SEO + AEO
06	Surface ROC #, BBB status, and a Google reviews badge on the homepage. <i>Easy, high-impact trust signals.</i>	SEO + AEO

Near-term growth

30–90 DAYS · COMPOUNDING

07	Build 5–6 unique East Valley city pages. Mesa, Gilbert, Chandler, Scottsdale, Tempe, Queen Creek — 600–800 words each, neighborhoods, ZIPs, embedded map, city-specific FAQs.	SEO + AEO
08	Promote eco / cool roofing to a real service hub page. Definitional content competitors aren't writing. <i>Owns the brand differentiator.</i>	AEO
09	Add 5-step process & transparent pricing-range section to each service page. <i>Improves both conversion and AEO citation odds.</i>	SEO + AEO
10	Add a named-expert "About Eric Perry" page. <i>Named-expert signals are increasingly weighted by AI systems.</i>	AEO
11	Add financing (Enhancify, GreenSky, Hearth) and surface in nav. <i>Closes a competitive gap on a \$10K–\$30K purchase.</i>	CONV.
12	Embed Google reviews and 4–6 quoted testimonials on service pages. <i>Removes friction at the decision moment.</i>	SEO + AEO

Foundational (ongoing)

CONTINUOUS · COMPOUND VALUE

13	Implement schema markup. LocalBusiness sitewide; FAQPage on FAQ & service-page FAQs; Service schema per service.	AEO
14	Tighten internal linking. Body-text links from homepage into city pages and material sub-pages with descriptive anchors.	SEO
15	Sitewide consistent NAP block in the footer. <i>Entity consistency for local search and AI extraction.</i>	SEO + AEO
16	Project gallery with location captions ("Tile reroof — Las Sendas, Mesa"). <i>Local proof at scale.</i>	SEO + AEO

08 — STRATEGIC NOTES

Where the upside is.

The biggest upside for Eco Roof is *not* more services or more cities — it's expressing what they already have more clearly, more locally, and more structurally. They have a real differentiator in a market that genuinely cares about cooling costs, real tenure, a named owner, and an HQ in the heart of the East Valley. Most of the visibility problems on this site are unforced errors, not strategic gaps.

A CLEAN ORDER OF OPERATIONS

Fix the leaks. Speak to AI. Build the content. Layer the polish.

1. **Fix the visibility leaks first.** The broken Mesa city page and broken sitemap are bleeding rankings every day. Neither requires content work; both should be addressed this week.
2. **Then fix the on-page intent signals.** Re-anchor the homepage title and H1 to the East Valley, surface ROC + BBB + reviews, commit to warranty terms in writing.
3. **Then rewrite the FAQ for AI.** The change most likely to start producing AI-search citations on a 60–120 day curve. Substantive answers, real numbers, FAQPage schema.
4. **Then build the eco hub and East Valley city pages.** Content investments, not infrastructure ones — they reward patience but compound for years.
5. **Then layer in financing, schema, gallery, and named-expert content** as ongoing improvements.

None of this requires a redesign. The site already has the right shape — it just needs the right content in the right boxes, with the right plumbing underneath. For a typical local service business, this is a 90-day arc that meaningfully shifts both Google rankings and how often the brand surfaces when someone asks ChatGPT or Perplexity, "who's the best roofer for an Arizona tile roof?" — and the eco angle gives Eco Roof a real shot at owning that answer.

09 — SCOPE OF SERVICES

Closing the gaps.

A scope built around the audit's findings — not a stock package. Each one-time line item below maps directly to gaps identified earlier in this report. Pricing follows our standard founding-client structure for early Phoenix-area clients.

Rapid Rescue — Technical & On-Page Fixes **\$2,500**

Restore /roofing-mesa-az/ and /sitemap.xml (both currently 500). Rewrite homepage title, H1, and meta with East Valley anchor. Add explicit warranty language sitewide. Surface ROC #, BBB status, and a Google reviews badge on the homepage. Sitewide NAP consistency. Resolve Gilbert vs. Mesa positioning in copy. Resubmit sitemap to Google & Bing.

CLOSES GAPS: Broken Mesa city page · Sitemap.xml broken · Brand-led title · No warranty terms · ROC/BBB not surfaced · Gilbert vs. Mesa mismatch

AEO Foundation — FAQ Rewrite + Schema Rollout **\$1,500**

Rewrite the FAQ page with 10–15 substantive, citation-worthy answers (60–120 words each, with real numbers, ranges, and timeframes the way AI assistants actually quote). Add per-service-page FAQ blocks. Implement *FAQPage*, *LocalBusiness*, and *Service* schema markup sitewide so search engines and AI systems can confirm entity facts.

CLOSES GAPS: FAQ answers not citation-worthy · No LocalBusiness or FAQPage schema

Eco / Cool-Roof Hub Page **\$1,250**

Promote the brand differentiator out of blog form into a canonical service-hub page built to be cited by ChatGPT, Claude, Perplexity, and Google AI Overview. Definitional content covering "what is a cool roof," reflective coatings in Phoenix heat, foam vs. tile energy comparison, and the AC-bill math. The page no East Valley competitor currently has.

CLOSES GAPS: Eco angle buried in blog only · AEO readiness · Service area / topical authority

East Valley City Pages — 6 pages **\$3,000**

Six unique 600–800 word city pages — Mesa, Gilbert, Chandler, Scottsdale, Tempe, Queen Creek — each with neighborhood callouts, ZIP coverage, embedded map, city-specific FAQs, and internal linking back to relevant service and material pages. Replaces the current city-list-as-signal approach with city-pages-as-asset.

CLOSES GAPS: Thin city pages · Service area clarity · Local positioning · Internal linking

Service Page Enhancement Bundle **\$1,750**

Add a 5-step process and a transparent pricing-range section to each core service page. Build a named-expert "About Eric Perry" page. Embed Google reviews and 4–6 quoted testimonials on service pages. Wire up financing partner (Enhancify, GreenSky, or Hearth) and surface in nav. Project gallery integration with location captions.

CLOSES GAPS: Service page depth · No financing · No transparent pricing · No embedded reviews · Named-expert content

Google Business Profile Optimization **\$1,250**

Full claim and rebuild of the GBP listing. Categories audited and corrected. Services and service areas filled with the language buyers actually use. Business attributes completed. Photo strategy with shoot guidance. Q&A seeded with the questions customers actually ask. Review-request workflow you can run from your phone. Duplicate listings resolved.

CLOSES GAPS: Local-pack visibility · Trust signals · Review velocity foundation

One-time scope subtotal

\$11,250

Founding-client discount (25%)

–\$2,813

One-time total

\$8,437

10 — RECURRING & INVESTMENT SUMMARY

The work that compounds.

One-time work fixes the leaks and builds the structure. The retainer is what keeps Eco Roof showing up in AI search as the models evolve and competitors react.

AEO Authority + Operations Retainer

~~\$1,500/mo~~ **\$1,000** /month

40–60 buyer-intent prompts tracked monthly across **ChatGPT, Claude, Perplexity, Gemini, and Google AI Overview** — so we know exactly when Eco Roof starts (or stops) being cited. Three eco-focused blog posts per week (~13/month, AEO-optimized for direct retrieval). Review-velocity system. Tactical adjustments when models shift their ranking behavior. Weekly performance summary email and a written quarterly strategy review.

FOUNDING-CLIENT PRICING — discounted from \$1,500/mo standard. Cancel anytime with one email, no forms or retention pitches.

Investment summary

LINE ITEM	INVESTMENT				
One-time scope (six services above)	\$11,250				
<i>Founding-client discount (25%)</i>	<i>-\$2,813</i>				
One-time total — 50% on acceptance, 50% on launch	\$8,437				
AEO Retainer — begins 1st of month after launch	\$1,000/mo				
Optional add-on — Social media foundation & management Most local roofers don't need this; some do. If Eco Roof wants a steady social presence (Facebook, Instagram, TikTok) tied to job photos and short-form video, we offer it as an add-on with the same founding-client pricing applied. <table><tr><td>Social media foundation (one-time)</td><td>\$750</td><td>Social media management (recurring)</td><td>\$1,500/mo</td></tr></table>		Social media foundation (one-time)	\$750	Social media management (recurring)	\$1,500/mo
Social media foundation (one-time)	\$750	Social media management (recurring)	\$1,500/mo		
QUOTE VALIDITY	START WINDOW	CANCELLATION	OWNERSHIP		
30 days from issue	7 business days from acceptance	One email — no forms or retention	Eco Roof retains all deliverables		

NEXT STEP

A 30-minute call to walk through the audit.

Bring questions. We'll walk the findings on screen, talk through what you'd want to keep or cut from the scope above, and tell you on the call if the math doesn't work for your business — rather than walk you through a pitch.
